Executive Summary

This document presents the After-Sales Service Portal for Duromax UPVC — a fully developed digital system that replaces ad-hoc WhatsApp coordination with a structured, transparent, and automated platform built for the Indian market.

What we built	A complete digital after-sales service platform for Duromax UPVC — replacing manual WhatsApp coordination with a structured, trackable, and fully automated system.
Who it serves	Three users: customers (raise & track requests), admin (manage tickets, invoices, staff), and field staff — supervisors who inspect and installers who carry out repairs.
How payments work	Two-stage online payments via Razorpay — UPI, Google Pay, PhonePe, net banking, and cards. Stage 1: site visit fee. Stage 2: spare parts + labour after the customer approves the quote.
Key automation	WhatsApp notifications at every step. Auto-reminders to supervisors and installers. Payment reconciliation in real time. SLA breach alerts to admin if deadlines are missed.
Go-live readiness	Full system is complete across all phases. Live in 1–2 weeks pending Razorpay KYC and WhatsApp template approvals.

System Features — What It Does

The portal handles every step of the after-sales journey across all three user types. Below is a complete feature breakdown.

□	**Customer Request Form**	Customers fill a simple form — name, mobile, address, brand of windows, issue type, description, and optional photo. No app download. No account needed. Ticket number sent to WhatsApp instantly.
□	**Two-Stage Invoicing**	Invoice 1 (₹3,000) for site visit before the supervisor goes. Invoice 2 for spare parts + labour after the customer approves the quote. Both sent as WhatsApp payment links.
□	**Supervisor Visit Flow**	Supervisor logs in via mobile OTP. Records complaint, observation, urgency, spare parts needed. Gets digital sign-off from both themselves and the customer.
□	**Installer Assignment**	Once the customer approves the parts quote, admin assigns an installer with the approved parts list. Installer receives auto-notification via WhatsApp with all details.
□	**Razorpay Integration**	Full checkout: UPI (GPay, PhonePe, Paytm, BHIM), all bank net banking, and debit/credit cards. Payment confirmed in real time — dashboards update without any manual action.
□	**WhatsApp Automation**	9 message templates covering every stage. Customers, supervisors, and installers all get automatic notifications. Admin gets email alerts for SLA breaches and new payments.
□	**Pipeline Board**	Admin sees all open tickets grouped by stage in a Kanban-style board with SLA indicators (on-track, warning, breached). Click any ticket to take action.
□	**Editable SLA Settings**	Admin can set custom due-date windows for each stage — e.g. "Supervisor must visit within 72 hours of assignment." System sends breach alerts automatically.
☆	**Feedback & Performance**	Customers rate overall service, supervisor behaviour, repair quality, and timeliness. Ratings are visible on each staff member's profile and in the admin dashboard.
□	**Staff Management**	Admin adds supervisors and installers from the dashboard — name, email, mobile. System creates their login, shows credentials, and tracks performance stats.

Service Flow — Step by Step

The following table shows exactly what happens at each stage, who takes action, and what the customer and team experience.

Step	Who	Action	What happens	Result
1	Customer	**Raises Service Request**	Fills form: name, mobile, address, brand, problem type, photo (optional)	*WhatsApp ticket number sent to customer.*
2	Admin	**Reviews & Raises Visit Invoice**	Confirms enquiry, sets outstation flag if needed	*₹3,000 payment link sent to customer via WhatsApp.*
3	Customer	**Pays Visit Fee**	Pays via UPI / net banking / card	*All dashboards update in real time. Receipt sent.*
4	Admin	**Assigns Supervisor**	Picks supervisor, sets visit date & time slot	*Customer + supervisor both notified via WhatsApp instantly.*
5	Supervisor	**Site Inspection**	Records observation, lists spare parts, gets digital sign-off	*Admin notified. Parts quote submitted.*
6	Admin	**Raises Repair Invoice**	Generates invoice from quote — customer sees breakdown	*Invoice + payment link sent via WhatsApp.*
7	Customer	**Approves & Pays**	Pays only after seeing the quote breakdown	*Admin dashboard updates. Installer can now be assigned.*
8	Admin	**Assigns Installer**	Assigns installer with approved parts list	*Installer notified via WhatsApp with full details.*
9	Installer	**Carries Out Repair**	Completes repair on site	*Job completion logged.*
10	Admin	**Closes Ticket**	Clicks Close — warranty activated	*Customer gets closure + feedback link. 1-year warranty starts.*

How Each Role Uses the System

Your Customers

Customers visit your website and fill a simple form — no app, no account. They select their window brand from a dropdown, describe the problem, and can attach a photo. They receive a WhatsApp confirmation with a ticket number and can track progress at any time by entering their ticket number and mobile. All payments are done via a WhatsApp link — UPI, GPay, PhonePe, or net banking.

Your Admin Team

The admin dashboard shows all tickets in a Kanban-style pipeline board, grouped by stage with SLA countdown indicators. Every action is one click — raise invoice, assign supervisor, assign installer, close ticket. The moment any customer pays, the dashboard updates automatically. SLA breach alerts arrive via email if a deadline is missed. Editable SLA settings let you customise due-date windows for each stage.

Supervisors (Inspect & Quote)

Supervisors log in on their mobile using an SMS one-time password — no password to remember. They see only the visits assigned to them. After the site visit, they fill a structured inspection report, list spare parts required with article numbers, and collect a digital sign-off from both themselves and the customer. Their personal dashboard shows completed tickets, ratings, and on-time percentage.

Installers (Carry Out Repair)

Once the customer approves the spare parts quote and pays, admin assigns an installer. The installer receives an automatic WhatsApp message with the site address, approved parts list, and visit schedule. They carry out the repair and confirm completion. The system tracks their assignment history, performance, and customer ratings separately from supervisors.

Development Cost — Phase-by-Phase

The cost below covers all seven phases of the complete system. This is a one-time cost. You own the code and can host it on your own infrastructure at any time.

Phase	Component	Includes	Cost
	TOTAL DEVELOPMENT COST	**₹1,10,000 + GST**	

Payment Terms

60%	On Initiation
25%	Before Testing
15%	After Testing

Scope Limitations

1. The services explicitly outlined above are included within our scope of work.
2. Any services or tasks beyond the defined scope shall be undertaken on a man-day basis and will be charged separately.

Delivery Timeline

All seven development phases are complete. The remaining time covers testing, third-party account setup, and deployment.

Timeline	Status	Deliverables
Weeks 1–2	**Complete**	Foundation, database, customer portal, admin dashboard (phases 1–3)
Week 3	**Complete**	Razorpay payments, supervisor & installer app (phases 4–5)
Week 4	**Complete**	WhatsApp notifications, SLA automation, staff management (phases 6–7)
Week 5	**Testing**	End-to-end testing with real devices, payment sandbox, WhatsApp sandbox
Week 6	**Launch**	Razorpay KYC, WhatsApp template approval, deploy to your domain, go-live

Ready to go live in approximately 1–2 weeks from contract signing — subject to Razorpay KYC approval (2–3 business days) and WhatsApp template approval (1–2 business days).
